

## What does your plant need to grow?

- **Good soil with compost:** The plant seed that grows from the seed feels fine in a small pot for a while. If the plant is a bit taller, it will be happy about a larger pot or a place in the garden.
- **Water:** Water your plant when you feel with your finger that the soil is dry (at least once a week). It should never dry out completely, but it should not be too damp either.
- **Light and Air:** Place or plant your plant in a bright, sunny spot, preferably outdoors in the fresh air.
- **Climbing Aid:** Some plants, such as the Rune Bean, need a pole or stick on which they can grow tall
